01 Practise a conversation, then improve it.

The standalone studio is the foundation. Start with a situation, reply naturally and use the debrief to plan another attempt.

STUDIO UPGRADE / DEPLOY TO USE

Open live demo

1 Choose or create

Select a situation. Custom scenario asks for roles, what happened and the outcome you want.

2 Type or speak

Text and voice are sent to OpenAI. Voice needs microphone permission. Sample uses authored content.

3 Review and retry

After a few exchanges, compare your words with the feedback, reflect and practise again.

Evidence-linked feedback

“What got in the way?” → possible observation: you invited the other perspective.

1 Set the context

Use fictional names and a concrete workplace moment. →

2 Rehearse

Keep the dashboard and visible brief. Use the compact composer. →

3 Reflect

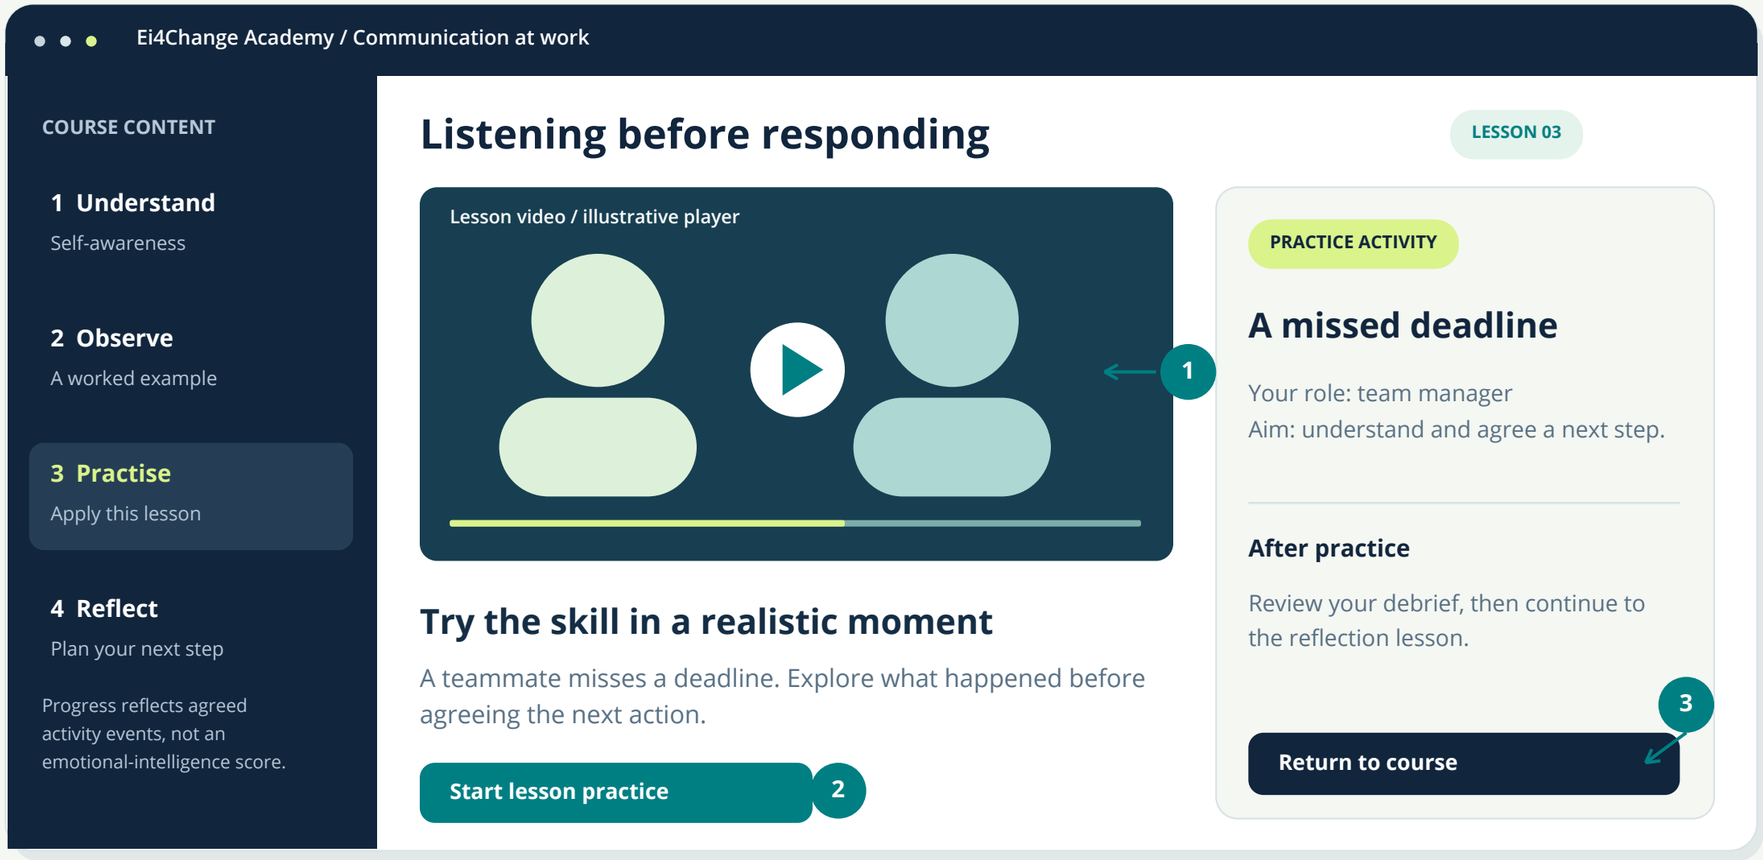

AI guidance is provisional; it is not an EQ score.

Authored interface concepts and example dialogue.

02 Put practice directly inside the course.

Course / LMS integration: the learner moves from a lesson into a relevant rehearsal, then returns to the learning path.

PROPOSED INTEGRATION

1 / LESSON CONTEXT

Ei4Change maps an approved scenario to the lesson skill.

2 / GLV BUILDS

Embedded practice, learner access and a return-to-course flow.

3 / NEEDED

LMS access, agreed completion events and content approval.

1 Watch or read
Learn the concept inside the existing course.

→

2 Practise the skill
Launch a scenario matched to that lesson.

→

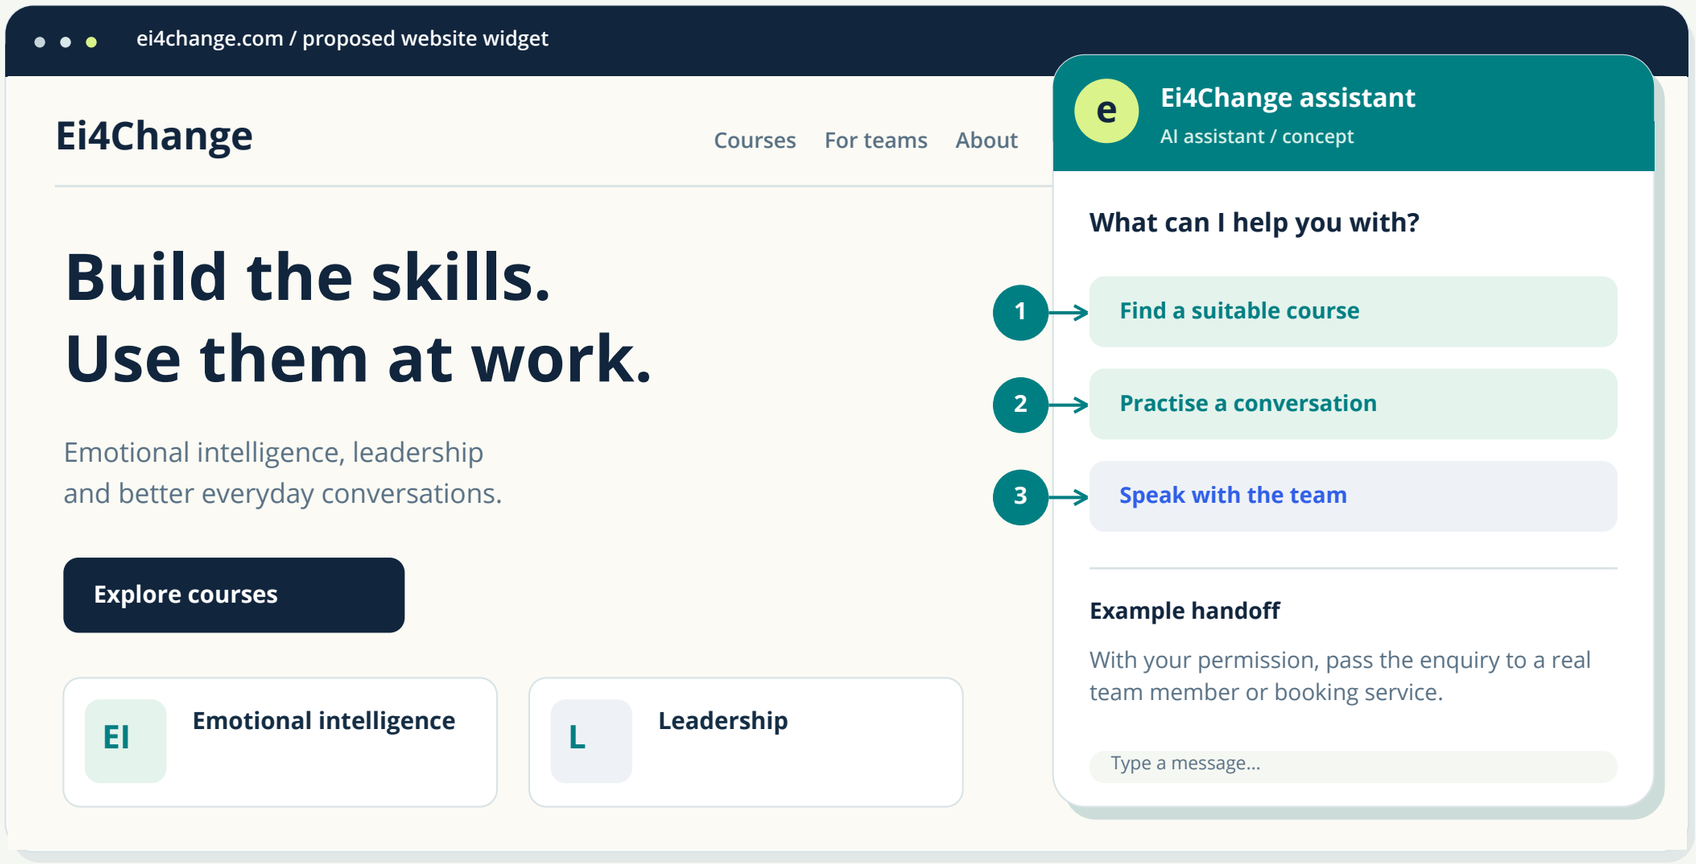

3 Continue learning
Return with a reflection or agreed completion signal.

Authored interface concepts and example dialogue.

03 Add a helpful assistant to the website.

Website chat widget: a compact entry point for course discovery, practice and an optional meeting handoff. Separate from learner records.

PROPOSED INTEGRATION

1 / COURSE DISCOVERY

Suggest from an approved catalogue using the visitor's goal.

2 / QUICK PRACTICE

Launch a short rehearsal or guide the visitor to the studio.

3 / HUMAN HANDOFF

Offer a real booking route when the visitor needs a person.

GLV builds: widget, knowledge and routing.
Needed: website access, catalogue and booking destination.

1 **Visitor chooses a need**
Courses, practice or a conversation with the team.

2 **Assistant helps**
Use approved content and clear AI identification.

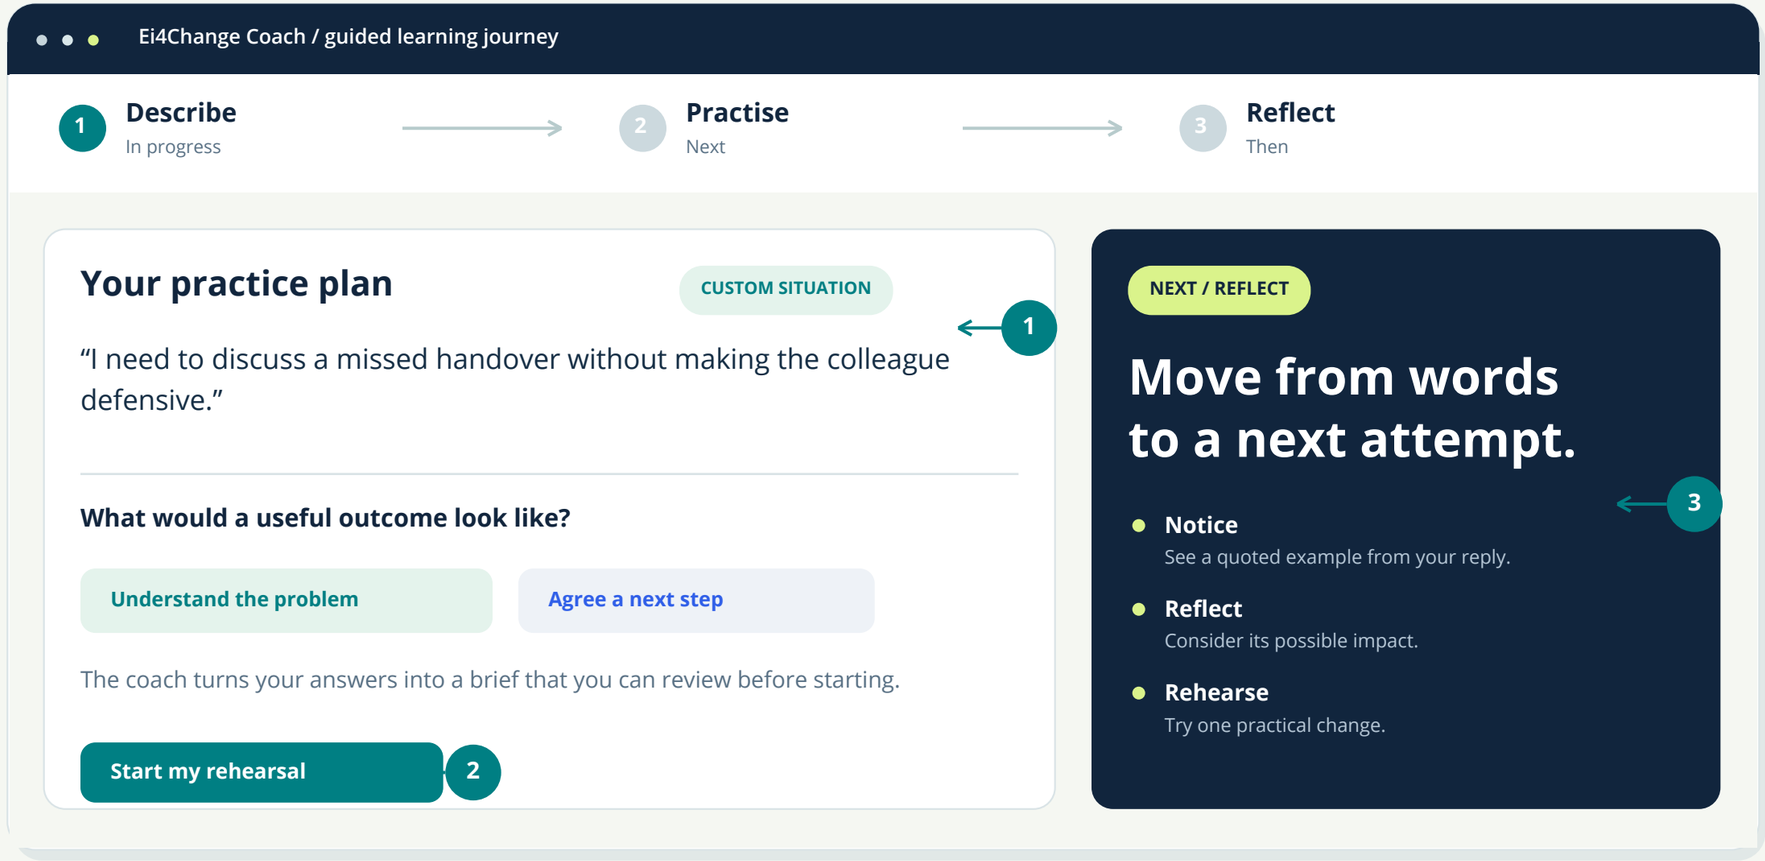

3 **Visitor controls handoff**
Confirm contact details before a team or booking action.

Authored interface concepts and example dialogue.

04 Guide the whole journey through conversation.

Full-page conversational coach: scenario setup, rehearsal and reflection in one guided experience. This is a proposed expansion of the studio.

PROPOSED INTEGRATION

1 / GUIDED SETUP

Ask for role, situation and aim. The learner reviews the brief.

2 / ONE WORKSPACE

GLV builds conversational setup, rehearsal and reflection states.

3 / APPROVED NEXT STEPS

Add course suggestions only after catalogue mapping and expert review.

1 Describe the moment
A guided conversation creates a focused practice brief.

2 Rehearse it
Meet a fictional colleague in text or voice.

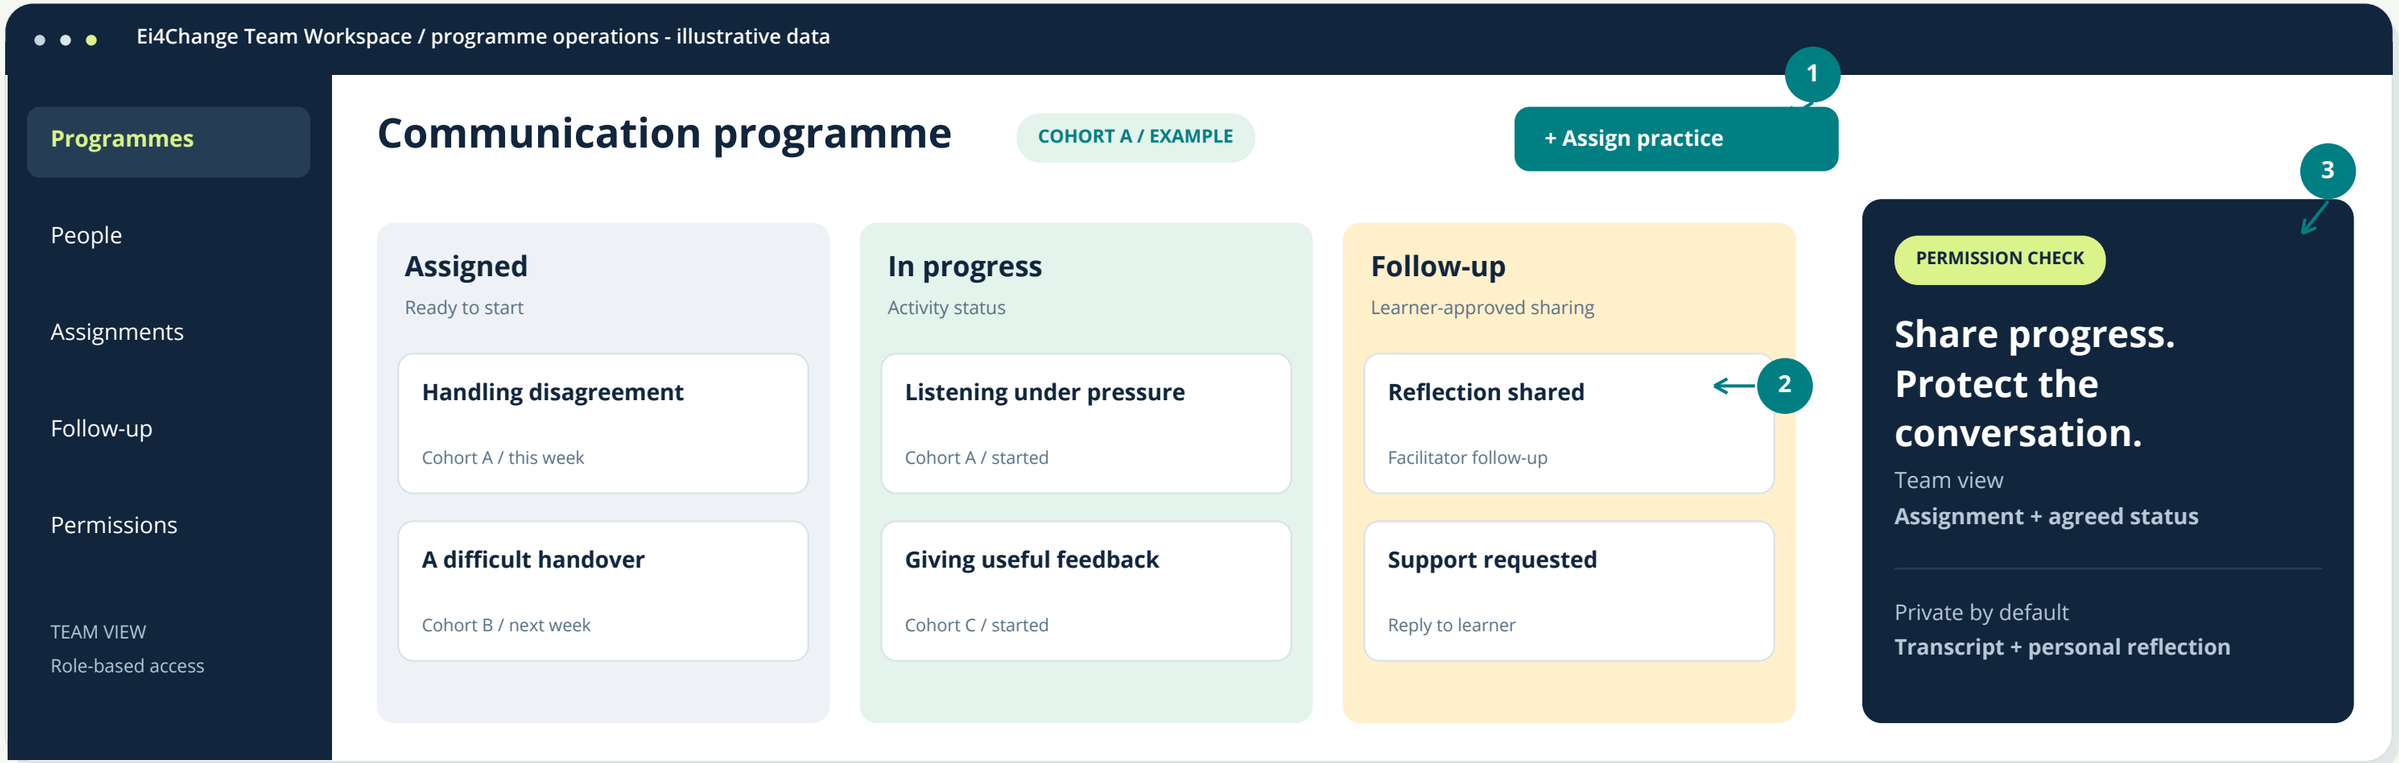

3 Choose what to try
Reflect on evidence and plan the next rehearsal.

Authored interface concepts and example dialogue.

05 Manage programmes without exposing private practice.

CRM / team workspace: organise cohorts, assignments and facilitator follow-up. This is a proposed management layer; today's studio is not a full CRM.

PROPOSED INTEGRATION

1 Assign a programme

GLV builds cohorts, roles, practice assignments and status views.

2 Follow up with purpose

Facilitators see agreed activity or learner-shared reflections.

3 Control what is shared

Agree permissions, retention, content/IP terms and support ownership.

WHY GLV
One practice service, adapted to the learner journey.

EI4CHANGE LEADS THE LEARNING
Approve scenarios, feedback criteria and calibration.

START WITH ONE INTEGRATION
Pilot, review quality and expand what proves useful.

Authored interface concepts and example dialogue.
